1/10 SCALE ELECTRIC POWERED RC TRUCK

PRECISION SHEET METAL
TRACTOR HEAD

photo by hiroyuki yabe / prototype: some finer details may differ on the production model.

PRODUCT FEATURES

- The product features a completely original design, based on the idea of a tractor head from the near future.
- The product is packed with unique features such as a king pin layout for fitting large diameter tires to its realistic body, rocker arm type suspension, a solid gearbox made of sheet metal, and more.
- All major parts such as the chassis and body are composed of precision sheet metal parts manufactured by Amauchi Industry. The parts are precision-made and anodized, making assembly easy and enjoyable.
- Because of its sheet metal build, the product can be built to a large size (total length: 505mm, total width: 258mm, total height: 297mm, tire diameter: 123mm), while still at a reasonable price.
- Additional option products planned for release include a loading deck that can be remotely operated, loading containers, action figures adjusted to scale, for a wide-range of play experiences.
